

Trimble Materials

Streamline Supply, Simplify Construction

Are you a contractor struggling to manage material costs, keep inventory in check, and maintain clear communication across your projects?

In today's competitive construction landscape, controlling every dollar spent on materials is critical to your bottom line. Without a unified system, you face challenges like unexpected shortages, costly waste, manual errors, and a lack of real-time visibility into your most valuable assets.

Introducing Trimble Materials – Your Comprehensive Solution for Smarter Material Management

Trimble® Materials is a purchasing and material management solution designed to streamline material purchasing, inventory, and accounts payable processes, from the field to the office, all in one solution.

By connecting your field, office, warehouse teams, and suppliers, Trimble Materials turns chaos into clarity and saves you significant time and money.

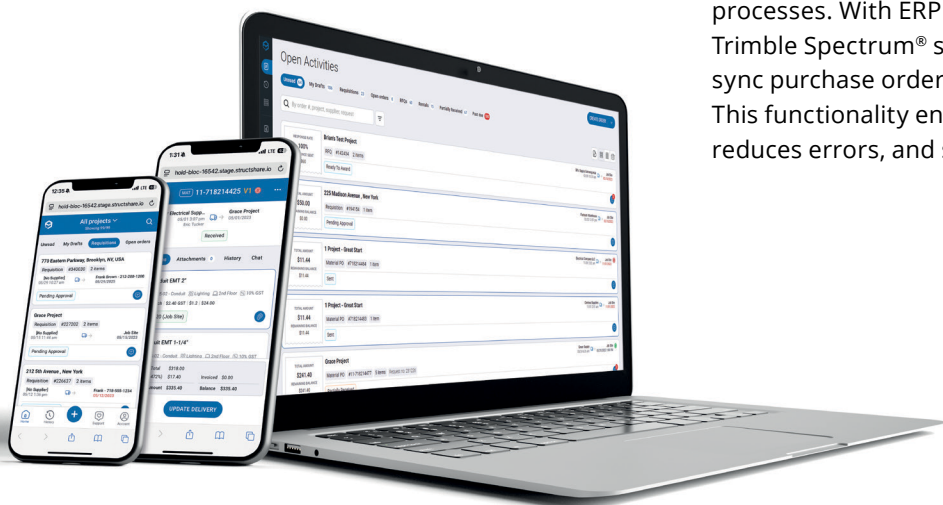

Centralized Material Management

Trimble Materials offers a single, digital solution for all your material management needs, connecting the job site, office, warehouse, and suppliers. Through its office and mobile applications, you can accurately and reliably manage material orders, inventory, and invoices from local suppliers, making it easy for all teams to get the data they need to get the job done.

With the Trimble Materials mobile application, field users can easily search for and request materials, view inventory, record received materials, and communicate with the office. Meanwhile, office teams like finance and purchasing can more efficiently control, approve, and process orders, view inventory, generate RFQs, compare quotes, and reconcile invoices.

Streamlined Purchasing and Accounting Workflows

Trimble Materials integrates seamlessly with Trimble Construction One solutions, empowering contractors to create more efficient estimating, operations, and accounting management processes. With ERP integrations for systems like Trimble Spectrum® software and Trimble Vista™, directly sync purchase orders, complete with line-item details. This functionality ensures more accurate tracking, reduces errors, and saves significant time.

Trimble Materials

Streamline Supply, Simplify Construction

Key Features That Drive Your Success:

Requisitions: Field teams can quickly search for and request materials, turning needs into orders and RFQs for accurate, on-time delivery.

Purchase order management: Easily manage and approve orders while tracking actual spend against budget, all without manual effort.

RFQs and quotes: Generate RFQs faster and compare quotes effortlessly to secure the best pricing, leading to significant material cost savings.

Materials receiving: Efficiently record received materials, including photo capture of packing slips, and communicate directly with suppliers. Get real-time office visibility and control over backorders.

Multi-warehouse inventory tracking:

Gain complete control and visibility into material availability with integrated inventory tracking in your purchasing workflows.

Invoice reconciliation: Catch invoice discrepancies and maintain updated purchase records with automated three-way matching of invoices, POs, and deliveries for efficient invoice reconciliation.

ERP integration: Seamlessly integrate with leading ERP and accounting systems like Viewpoint® Spectrum and Vista to simplify setup of projects, cost codes, users and suppliers while also providing ongoing sync of POs and invoices.

Analytics: Make smarter purchasing decisions by tracking pricing trends and negotiate better supplier prices using share-of-wallet insights.

Tangible Benefits of Trimble Materials

50%

Reduction in time
spent managing POs

5hr

Weekly time saving
for each foreman

30%

Less overhead in PO
creation and tracking

5-10%

Direct material cost savings

90%

Decrease in billing errors

80%

Reduction in
inventory stockouts
